

Fully Automated Packaging Solution Project Implementation

Heinz provides delicious, nutritious and convenient foods for families in 200 countries around the world. The UK and Ireland market are one of its strongest territories.

THE PROJECT

Heinz required Protolan to design and develop a fully automated palletisation system.

THE CHALLENGE

Protolan developed a fully automated end of line packing solution incorporating 5 production lines into 3 robots – 2 pairs of sachet production lines sending cardboard cases to 2 robot cells and 1 plastics line (jars and bottles) sending packs to the 3rd robot cell. The project also included relocation of storage and engineering areas

DELIVERING SUCCESS

Utilising both extensive project management and project engineering skill sets this complex scheme was successfully completed for Heinz - on time and on budget.
