

Ready Meals Facility Expansion

Greencore Prepared Meals required additional Process Retort units to manage secured business from the multiple grocer sector.

The Challenge

In order to minimise capacity shortfall Greencore Prepared Meals required an enhanced Process Retort system which would manage additional volumes.

Delivering Success

Protolan worked directly with the Greencore team to identify best practice for the implementation of the Process Retort.

Protolan were integral to the development of a rationalised production plan which resulted in the development of a large extension to accommodate new production equipment and a new boiler house and water tower.

A smaller extension was required to house a new packaging store and airlock.

Another aspect of this project was to identify a bespoke manufacturing assembly line for high volume potato based ready meals. This included detailed investigation of best methodology for the depositing of hot and cold mashed potato in predefined styles.
